

CHOOSE TO COMPARE COST AND PERFORMANCE OF A FLOOR BEFORE CONSTRUCTION BEGINS.

Comparis® Rapid Estimating Software.

Whether floor performance or building cost is the driving factor, Comparis® rapid estimating software gives you the numbers your builder wants before construction even begins. With the estimating capabilities of Comparis software, you get an opportunity to help your customer balance performance and material costs by providing square-foot pricing based on the selection of floor materials (including hangers and iLevel® Rim Board, but not beams) and the desired performance using iLevel® Trus Joist® TJ-Pro™ Rating values.

- Estimates floor systems quickly based on material prices and waste factors.
- Compares prices between alternate depths, joist series, spacing, and panels.
- Improves floor system selections.

COMPARE THE OPTIONS.

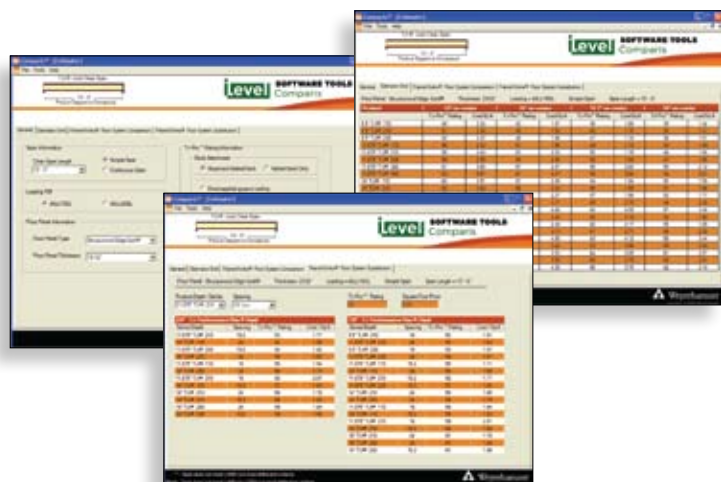

With Comparis estimating software you can quickly see, either on-screen or on a customized printout, how iLevel® products work together to deliver a better floor system—a system that performs better and is more cost-effective than when products are purchased and used as individual members.

Comparis estimating software lets you suggest the best size, thickness, and combination of iLevel Trus Joist TJI® joists and iLevel Edge Gold™ panels, and then make accurate comparisons of overall performance and costs, not just evaluate them individually.

To help you respond to a homebuilder's most important criteria—performance and price—Comparis estimating software lets you quickly adjust variables and parameters like joist spacing and subfloor, or modify the choice of materials in order to evaluate and select the best combination of floor system materials that will meet that criteria. So, your customers can choose options that will best meet their needs in their market, desired floor performance, and cost-efficiency.

Comparis software helps users determine which floor is optimal, and then works together with iLevel Forte™ and iLevel Javelin® software to design the whole house and get the best system for the entire structural frame.

Contact your iLevel representative or iLevel dealer to see how Comparis software works to help you build a better floor system. Or, for more information about iLevel's commitment to deliver whole-house solutions, visit www.ilevel.com.

COMPARIS® SOFTWARE LETS YOU CHOOSE THE FLOOR SYSTEM THAT BEST SUITS EACH PROJECT:

- Provides quick floor assembly estimates based on specific criteria balancing performance with cost.
- Create price comparisons of product options based on a wide range of performance criteria, alternate depths, joist series, spacing, and panels
- Calculate prices with or without sub-flooring
- Import regional material and pricing data using Microsoft® Excel spreadsheets
- Use iLevel Trus Joist TJ-Pro Ratings to help predict how a floor system will perform* before it's built.

*Floor performance is subjective and may not satisfy every end user.
