

DON'T LET YOUR CREWS CUT CORNERS— WE'LL DO IT FOR YOU.

iLevel™ Trus Joist® TimberStrand® LSL 1.3E 45-Degree Column

Angles are the hot new interior attraction. Used in imaginative places like bedroom doorways, hallways, pantries, and corner fireplaces, 45-degree angles create those distinctly original sight lines that homebuyers and architects love. And with the right product, they don't have to be difficult to install. TimberStrand® LSL 45-Degree Columns show up on the job site machine-cut to precise tolerances, eliminating the need for field-ripping angles. So, no more broken corners or corner bead cracks caused by the shrinking and twisting of corners made from other materials and ripped on-site.

- Precise 45-degree corners every time
- 1.3E TimberStrand® LSL starts straight and stays straight
- Can be used for 2x4 or 2x6 walls
- Supports short-span window and door headers

PUTTING IT ALL TOGETHER

The 1.3E TimberStrand® LSL 45-Degree Column provides great structural support. Its solid cross-section makes it much easier to hang drywall and attach sheathing. But the best news is that it comes pre-measured and pre-cut. Even for skilled framers, it's not easy to cut 2x4's in the field with a circular saw and get them uniformly straight, at just the right angle. It can take multiple tries and waste valuable product. With our 45-Degree Column, even a rookie crew can get the corners right the first time, and that saves time, money, and materials.

Get the TimberStrand® LSL 45-Degree Column and you'll get TimberStrand® LSL performance, exceptional technical and engineering support, and the iLevel limited product warranty. Bring on the angles, we'll cut your corners for you.

TIMBERSTRAND® LSL 45-DEGREE COLUMN BENEFITS

- Easy to assemble and install
- Helps save time and money
- Less chance of nail pops and joint cracks
- Simplifies sheathing and drywall attachment
- Long-term reliable performance
- Backed by iLevel's Limited Product Warranty
